PROFESSIONAL SUMMARY

Python AI Engineer with 1.5+ years of experience building production-grade applications, RESTful APIs, and LLM-powered features using Python, Django REST Framework, and PostgreSQL. Hands-on experience with Generative AI, LangChain, LangGraph, RAG pipelines, prompt engineering, LLM inference, and LLM API integrations including OpenAI and Groq. Experienced in developing AI-powered applications, optimizing backend systems, and deploying scalable production services.

EDUCATION

Dr . A.P.J. Abdul Kalaam Technical university Sep 2021 - May 2025
B.Tech, Computer Science & Engineering GPA: 8.33/10

SKILLS

Technical Skills: Languages: Python, SQL, AI / Generative AI: LLMs, Generative AI, LangChain, LangGraph, RAG Pipelines, Prompt Engineering, LLM Inference, Ollama, DeepSeek-R1, OpenAI API, Groq API, Conversational AI, Frameworks: Django, Django REST Framework, FastAPI, Streamlit, Databases: PostgreSQL, MongoDB, SQL, Django ORM, Machine Learning: Scikit-learn, PyTorch, TensorFlow, Data Preprocessing, Model Training, Model Evaluation, DevOps / Tools: Git, GitHub Actions, Docker, Vercel, Render, Linux, Grafana, Ollama, Practices: REST API Design, Agile/Scrum, SDLC, Code Review, CI/CD

WORK EXPERIENCE

Kaizen Art & Craft | Software Development Engineer Feb 2026 - Present

- Delivered end-to-end development of a product catalog and ordering platform across the full SDLC using Python, Django REST Framework, and PostgreSQL.
- Optimized backend API response time by 30% through Django ORM query optimization and response serialization; deployed frontend on Vercel and backend on Render with Git-based CI/CD pipelines.
- Used AI coding agents including Cursor, Claude Code, and GitHub Copilot to accelerate feature development, debugging, and code review across the stack.

Circle Chess | Software Development Engineer Jul 2025 - Jan 2026

- Diagnosed and resolved critical performance bottlenecks in a Python/Django REST API backend, reducing average API response time by 35% through database query optimization and caching improvements.
- Monitored system health, API latency, and error metrics using Grafana dashboards; identified and fixed recurring bugs, reducing platform error rate by 40%.
- Refactored legacy Python/Django code following software development best practices, improving code readability, reducing technical debt, and strengthening system reliability.

Softpro | Full Stack Intern Jun 2024 - Aug 2024

- Built full-stack web features using Python, JavaScript, React.js, and SQL under senior developer mentorship, following Agile sprint workflows and Git version control.
- Integrated third-party REST APIs and developed responsive UI components, improving application data-fetching efficiency and user interaction quality.

Cognifyz Technologies | Machine Learning Intern Feb 2024 - May 2024

- Developed and evaluated predictive ML models using Python, scikit-learn, and TensorFlow; designed data preprocessing pipelines that improved model training efficiency by 30%.
- Integrated trained ML models into a Python-based backend, gaining practical experience applying AI/ML to real-world business problems within an Agile team.

PROJECTS

DeepSeek Code Companion – Local LLM Coding Assistant

- Built a local LLM-powered coding assistant using Python, Streamlit, LangChain, and Ollama with support for DeepSeek-R1 1.5B and 3B models.
- Implemented multi-turn conversational memory using Streamlit session state and dynamically constructed LangChain chat prompts.
- Integrated LangChain's ChatOllama interface and output parsing pipeline to perform local LLM inference without external API dependencies.
- Designed prompt engineering workflows for code generation, debugging, documentation, and solution design with configurable model selection and temperature.
- Developed an interactive Streamlit interface with real-time LLM responses, model configuration, custom UI styling, and conversational chat history.

News Summarizer Bot

- Built an automated LLM-powered news summarization pipeline that scraped web content and generated concise daily digests using the Groq LLM API.
- Designed structured prompt engineering workflows to generate consistent summaries from unstructured news content.
- Automated scheduled execution using GitHub Actions and delivered generated summaries through the Telegram Bot API.

TaskFlow – Django REST API Task Management System

- Designed and developed a scalable RESTful API with Django REST Framework and PostgreSQL for users, projects, and task management.
- Implemented JWT authentication, role-based access control, and CRUD APIs for task assignment, status tracking, and deadline management.
- Optimized database access using Django ORM select related/prefetch related, reducing API response time by 25%; documented APIs using Swagger/DRF-YASG.

CERTIFICATIONS & ACHIEVEMENTS

- Getting Started with Rust (LFEL1002) - The Linux Foundation Jan 2025
- Introduction to Deep Learning & Neural Networks with PyTorch - The Linux Foundation Jan 2024
